CERTIFICATE

This is to certify that the Lab work entitled "Compiler Design" carried out by **Likith R (1BM21CS151),** who is bonafide student of **B. M. S. College of Engineering.** It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum during the year 2023. The Lab report has been approved as it satisfies the academic requirements in respect of a **Compiler Design course (21CS5PCCPD)**work prescribed for the said degree.

Aim of the program

Write a program to design Lexical Analyzer in C/C++/Java/Python Language (to recognize any five keywords, identifiers, numbers, operators and punctuations)

Program

```
def analyze_input(input_text):
    keywords = ["char", "float", "bool", "int", "for", "break", "continue"]
    punctuation = [".", "!", ";", "?"]
    operators = ["+", "-", "*", "/", "%", "="]

    keys, ids, nums, ops, punct = 0, 0, 0, 0, 0

    for i in input_text.split():
        if i in keywords:
            if keys < 5:
                print(f'{i} is a keyword!\n')
                keys += 1
        elif i in punctuation:
            if punct < 5:
                print(f'{i} is a punctuation!\n')
                punct += 1
        elif i in operators:
            if ops < 5:
                print(f'{i} is an operator!\n')
                ops += 1
        elif i.isnumeric():
            if nums < 5:
                print(f'{i} is a number!\n')
```

```
            nums += 1
        else:
            if ids < 5:
                flag = False
                if i[0].isalpha() or i[0] == '_':
                    flag = True
                for j in i[1:]:
                    if j in operators or j in punctuation:
                        print(f'{i} is an invalid token!\n')
                        flag = False
